

CNSOPB releases Offshore Geological Study

June 27, 2005

Halifax, NS - The Canada - Nova Scotia Offshore Petroleum Board (CNSOPB, the Board) has released a detailed geological study of the Carbonate Bank margin offshore Nova Scotia.

The study, official entitled "The Upper Jurassic Abenaki Formation Offshore Nova Scotia: A Seismic and Geologic Perspective" is part of the Board's ongoing efforts to evaluate and assess offshore petroleum resources. Compiling this data in a useable format is invaluable to oil and gas companies looking to explore in the region, as well as academic researchers both nationally and internationally.
