Figure 3: Composite seismic section across the Sable Subbasin; the track is shown in Figure 1. This 200 kilometer long composite profile was acquired from the following organizations through various seismic contractors: Canadian Petroleum Contractors (ExxonMobil), ExxonMobil 3D (ExxonMobil), Marathon 3D (CGGVeritas) and the TGS Regional 2D (TGS-NOPEC). A comprehensive description of this line can be found in Kidston et al., 2007.
