CANADA-NOVA SCOTIA
OFFSHORE PETROLEUM BOARD

Chief Safety Officer Decision

Decision Date: 24 January 2020
Applicant: Noble Drilling Services (Canada) Corporation
Reference: NRA-DP-RQ-012 - Deluge System - Manual in Lieu of Automatic Operations
Project: Deep Panuke
Installation Name: Noble Regina Allen
Authority: Canada-Nova Scotia Offshore Petroleum Resources Accord Implementation Act (Federal version), Section 155(1)(b).
Regulation: Nova Scotia Offshore Petroleum Installations Regulations, Section 25(4)(a)

Decision:

Noble Drilling Services (Canada) Corporation has requested a deviation from Section 25(4)(a) which requires a water deluge system to operate automatically in response to a signal from the fire detection system.

Acceptance of the deviation is based on the rationale that the Noble Regina Allen is constructed in accordance with 2009 IMO MODU Code and 2008 ABS MODU Rules, and by reference, the International Code for Fire Safety Systems (FSS). Considerations include the locations where manual activation is required and the arrangements for manual activation.

The Certifying Authority concurs that the proposal meets the requirements of Certificate of Fitness Regulations Section 4(2)(a)(ii).

The Chief Safety Officer hereby grants a deviation from Section 25(4)(a) of the Installation Regulations, and is satisfied that these arrangements provide an equivalent level of safety to that provided by the Regulations.
